## **TWO MORE BIRDS TEST POSITIVE FOR WEST NILE VIRUS** *Residents Urged to Report Dead Birds to County Vector Control*

County Vector Control officials announced today that two more Western Scrub Jays found in El Cajon and Bonsall have tested positive for West Nile virus.

"We encourage residents to continue reporting dead birds. Last year we saw the majority of dead birds reported in September and October," said Gary Erbeck, Director of the County Department of Environmental Health. "The dead bird reports help us to identify communities where West Nile virus is most active."

Vector Control continues to pick up and test crows, ravens, jays, hawks, owls and falcons to monitor the spread of the virus. The public is encouraged to report dead birds that meet the following criteria: the bird has been dead for less than 24 hours, does not have a foul odor, is not covered with ants or flies, is not stiff; and the body is intact and has not been hit by a car, has not been shot, or killed by animals. All other dead birds should be placed in a plastic bag and discarded in a covered trash can. While you cannot get West Nile virus from dead birds, you should wear disposable gloves if you must handle birds.

Protect yourself from mosquito bites by wearing insect repellent containing DEET, Picaridin or Oil of Lemon Eucalyptus; wear long sleeves and long pants when outside, especially at dawn and dusk; and ensure windows and screens are well-maintained to keep mosquitoes from entering the home. Eliminate mosquito breeding sites around your home and use mosquito eating fish in unused swimming pools, ponds and fountains.

To report dead birds or mosquito breeding sites please call County Vector Control at (888) 551-INFO (4636). You can also report dead birds on the County's West Nile virus Web site at [www.SDFightTheBite.com](http://www.SDFightTheBite.com).
